A Lithuanian packaging producer has completed a 1.4MW solar project on the roof of its factory in Lentvaris, Lithuania.

The installation on the RETAL factory is claimed to be the largest solar panel rooftop installation in the Baltic States.

Worth more than €1 million (£880,000), the panels were installed by I+D Energias Lithuania, a partner of Sun Investment Group (SIG).

RETAL, a manufacturer of sustainable plastic packaging, will now adopt renewable energy as their main source of electricity
