

Packaging Special

Sustainable films

20 Apr 2020

Retal increases their sustainability-focused films portfolio with the introduction of up-to 100% rPET films. These food-grade films are made from all colours and all kinds of PET scrap (post-consumer PET bottle, trays and industrial). Regional sales manager Violeta Petkeviciute says, "We've been producing up-to 80% rPET films for some time now, so it's exciting to show how we've upped our sustainability credentials even more with our latest films development." As well as the 100% rPET films, sealable and BioPET films are also in Retal's portfolio.
