Executive Summary makes Sustainability Report more accessible

23 JANUARY 2023 11:00

A Sustainability Report is an important way to inform stakeholders of sustainability actions and goals across the business.

RETAL's latest Sustainability Report (for the period 2021) has recently been published and is available for download. The 80-page, informative document explains the company's holistic CSR approach and presents its results. This is the first year that RETAL has also produced an Executive Summary; a concise version containing only the key facts and figures which can be easily shared, understood and translated, with each local plant able to offer it to their customers.

Sustainability Director Emmanuel Duffaut says, "The most important thing is that everyone who wants to know what we're doing in terms of sustainability can find out quickly and easily. The Executive Summary follows the same structure and explains the full report in just six pages. It's a great addition to the Sustainability Report for the convenience of our stakeholders and customers.

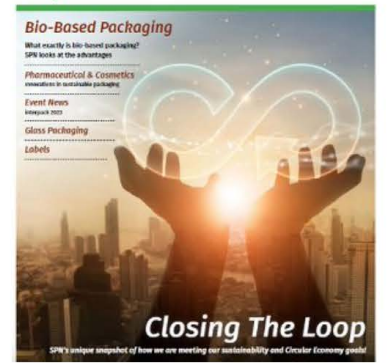

The increasing demand for ever more thorough sustainability reporting is great for boosting an organizations' transparency and quantifiable CSR actions but can make it harder for stakeholders across the value chain to understand, especially if English is not their native language."

The RETAL Sustainability Report 2021 Executive Summary is available for download [here](#).

Smarter recycling starts here
For far too long now, recyclers have needed to go through the extra step of removing labels from PET bottles during the recycling process.
