RETAL Baltic Films: Mono solutions presented at Interpack

📅 2023-01-24 ⌚ 0:57 min 📁 [Interpack 2023, Sheets & Films](#)

🏢 RETAL Group 📍 Limassol, Cyprus

RETAL Baltic Films will be adding to its extensive flexible packaging portfolio with mono solutions for APET and top lidding films at this year's Interpack in Dusseldorf from 4-10 May 2023.

The team will be available at stand C10 in Hall 12, answering questions, offering samples and sharing the advantages of its agile range of films for the food and film conversion markets.

RETAL Baltic Film's team of rigid and flexible film experts will present how its latest sustainable solutions for mono packaging can support recyclability goals of its customers. When sourcing both rigid bottom and top lidding films from one supplier, RETAL partners can be sure their packaging needs will be solved with the highest attention and customization. In-house packaging equipment installed at RETAL Baltic Films helps to cut downtime on customers' lines as analysis is made before reaching the production line.

General manager Viktorija Griziene says, "I am looking forward to highlighting our flexibility, product quality and personalized customer approach at Interpack; 2023 is set to be another strong year for us as we continue to invest and expand, so we shall be talking to our customers and seeing how our latest innovations can support their sustainable packaging goals. As a rather small but experienced team with the benefit of being part of a multinational group with its own resin production, we are agile but with a stable supply of raw materials and stay close to the latest developments in the market."
